

Living things and their Habitats

Crucial Knowledge

Habitats are where things live.

Things are living, dead or never lived.

A food chain shows how animals get their energy.

Food chains always start with a producer.

A producer is a plant, a plant makes its own food.

The arrow in a food chain means 'is food for'

Living things depend on each other for survival if something is taken away or destroyed, the living things might not survive or may have to adapt.
